

Pallet exchanger

rotation, clamping, push-off function, side arm

The pallet exchanger PWK 30 with hydraulic side arm and pusher is used for clamping loads and rotating them through 180°, allowing to load the goods without the pallet. Total rotation is 360°. The rotator uses a worm gear system protected against the ingress of dirt and will give a long service life. The hydraulic side arm provides additional stability to the clamped loads. The pusher pushes the loads off the attachment for palletless loading. The pallet can be removed manually. The unit is suitable for loading bagged or boxed goods. Stainless contact surfaces for the load avoid stain marks on the goods.

- 2 hydraulic functions required
- 2 electric functions required
- included pressure relief valve, hoses and couplings
- includes solenoid valves
